IAP Goal FY2016: Reduce hospital onset *C. difficile* rate to **11.1 cases / 10,000 patient days.**

**FACT:** Take an antibiotic time out! Consider narrowing or stopping after 48 hours.

**MYTH:** Empiric antibiotics need to be continued for a full course.

Get Smart About Antibiotics to Prevent *C. difficile*!

**If** prescriptions of high-risk antibiotics in hospitals are **reduced** by 30%

**Then** it could lead to **26% fewer** cases of deadly diarrhea infections
