Central Venous Catheter Insertion/Removal Competency

This form should be completed by the Program Director and trainee after competency requirements have been met. Once completed, the original form must be submitted to the GME Office. This form must be completed each year the competency applies. The Program Director should only initial those procedures for which competency has been met.

Competencies define procedures or activities that the resident/clinical fellow can usually perform without on site supervision: Patient management, including H&Ps and diagnostic and therapeutic treatments, procedures and interventions encompassing the areas described below and similar activities. The underlying patient condition and complexity of the procedure might dictate the need for direct supervision and physical presence of the attending physician. Whenever a question arises about resident/clinical fellow competency to perform a procedure independently, the attending physician should be consulted.

PD Initials

_______  Removal

_______  Insertion: Internal jugular

_______  Insertion: Subclavian

_______  Insertion: Femoral
