specialty choice in the future

As Step 1 goes P/F and UCSF does not have grades for clinical rotations your clinical letters of recommendation and research become much more important. Research can encompass a wide range of scholarly work but you need to accomplish something (i.e. papers presentations some form of a finished project) AND to be able to speak about in depth (your involvement impact of your work etc.).

For ophthalmology, I noticed that research was a major talking point and a lot of my colleagues that matched well had strong research backgrounds (multiple ongoing projects with multiple publications). Finding a strong research mentor and being involved in research projects early can provide for a very strong application, especially given that Step 1 will become P/F in the near future. Letters of recommendation are also very important and were frequently brought up during interview season. Although it is recommended to have two letters from ophthalmology faculty and one from medicine/surgery, there are students who matched very well with three ophthalmology letters. Definitely prioritize having strong letters from ophthalmology faculty that know you well. Lastly, I think doing an away rotation can help open other geographic opportunities. It was unexpected to not receive as many interviews from my home state, so I feel like doing an away rotation can help in landing more interviews in other locations.

Complete as much ophtho research as possible! With the changes to step, AOA, and no grades in 3rd year, research becomes one of the best ways to distinguish yourself from other applicants.

Finding mentors with a lot of years in the field is incredibly important. In ophthalmology, name recognition plays a large role in your application. Seek out experienced mentors who have a lot of connections early (2nd/3rd year), build a relationship with them, so that when it comes time to advocate for you for interview slots and residency slots, they are more comfortable advocating for you.

Apply very broadly! Practice answering interview questions with someone close to you (like a friend or family member) to help get into the groove of answering lots of questions back-to-back in a low pressure setting. Reach out to residents and near peers for advice as you get closer to the residency application cycle especially for tips that would be specifically helpful for your specialty. Make sure to get letters from mentors who know you well AND who are well-connected in the field - it really makes a big difference (especially important in smaller fields like ophtho where people seem to all know each other!)
